Valve station Type **ICF 15, ICF 20, ICF 25, ICF 50 and ICF 65**

ICF valve station incorporates several functions in one housing, which can replace a series of conventional mechanical, electro-mechanical and electronically operated valves
Now available with new function module specifically designed for NeoCharge

Based on advanced technology the ICF valve station incorporates several functions in one housing, which can replace a series of conventional mechanical, electro-mechanical and electronically operated valves.

This valve station not only provides a number of advantages in the design phase of a refrigeration plant but also in the installation, service and maintenance.

The ICF valve stations are designed for low and high pressure refrigerants and can be used in pumped liquid lines, liquid injection lines, liquid drain lines and hot gas lines.

Supplied as a complete assembly, it is fully tested at high pressure and its functions are tested under factory controlled conditions.

One code number equals one application solution.

Features

- Designed for industrial refrigeration applications for a maximum working pressure of 52 bar/754 psig. (For ICF 20-2 and ICF with ICFD defrost module; see Technical Data, Pressure [Page 18](#))
- Applicable to HCFC, non flammable HFC, R717 (Ammonia) and R744 (CO₂). The use of ICF valve stations with flammable hydrocarbons is not recommended
- Direct weld connections (No leaks through flanges)
- Connection types include butt weld and socket weld
- Now available with new function module designed for NeoCharge - [Page 69](#)
- Low temperature steel housing
- Low weight and compact design
- V-port regulating cones on the control modules ensure optimum regulating accuracy particularly at part load
- Modular Concept:
 - Each housing is available with several different connection types and sizes. Valve service is performed by replacing the function module
- Side ports for the connection of pressure gauges, transmitters, sight glasses, service valve etc.
- UL approved

Example of application

Liquid feed line

A valve combination for a flooded evaporator operating on/off from a thermostat and with electric defrost is required. Manual override of the solenoid valve is requested. Common ICF configurations for this kind of application is shown here:

Functions

Each housing accommodates a maximum of two, four or six function modules (ICF 65 max. 3), of the following types:

- Shut-off valve module
- Manual regulating valve module
- Strainer module
- Solenoid valve module
- Electronic expansion valve module
- CCR (Controlled Circulation Rate) PWM (Pulse Width Modulation) function module
- WDX (Wet Direct Expansion) module
- Manual opening module
- Check valve module
- Stop & check valve module
- Pilot-operated valve module
- Defrost drain module
- Motor operated valve module
- External welding connection module
- Blind top cover

Optional:

All housings except ICF 20-2 are supplied with a predefined number of side ports for the following options:

- Sight glass
- Temperature or pressure sensor
- Pressure gauge
- Side exit for drain or bypass.

Description of the function modules for ICF 15 and 20

ICF 15 and ICF 20 have the same function modules except for the two fixed modules M1 (stop valve ICFS 15) and M2 (filter ICFF 15) in ICF 15.

ICF 20-2 is only available with modules ICFC 20, ICFC 20H, ICFB 20 and ICFO 20.

Media

Refrigerants

Applicable to HFC, R717 (Ammonia) and R744 (CO₂)

The use of ICF valve stations with flammable hydrocarbons is not recommended.

Exception: ICFD is released for ammonia and CO₂ refrigerants.

ICFD 20 - ammonia version.

ICFD 20C - CO₂ version.

Only approved for land-based applications only.

New refrigerants

Danfoss products are continually evaluated for use with new refrigerants depending on market requirements.

When a refrigerant is approved for use by Danfoss, it is added to the relevant portfolio, and the R number of the refrigerant (e.g. R513A) will be added to the technical data of the code number. Therefore, products for specific refrigerants are best checked at store.danfoss.com/en/, or by contacting your local Danfoss representative.

Surface protection

The external surface is zinc-TLP treated to provide corrosion protection according to EN ISO 2081:2009. Additional on-site corrosion protection is recommended.

Pressure

The general ICF is designed for max. working pressure: 52 bar (754 psig).

ICF 20-2:

Max. working pressure: 65 bar (943 psig).

ICFD 20 (Ammonia):

For ICF with ICFD module the max. working pressure is 28 bar/406 psig. If the refrigeration system include ICFD 20 module, a test pressure of the system must not exceed 28 bar/406 psig, unless the ICFD float is temporarily taken out before test.

ICFD 20C (CO₂)

For ICF with ICFD 20C module the max. working pressure is 52 bar/754 psig. If the refrigeration system include ICFD 20 module, a test pressure of the system must not exceed 52 bar/754 psig, unless the ICFD 20C float is temporarily taken out before test.

Max. working pressure for ICFD without float: 52 bar (754 psig).

Maximum differential pressure

ICFD 20: 15 bar/218 psig. For higher differential pressure, please contact Danfoss.

ICFD 20C: 36 bar/522 psig.

Design

The main components of the ICF valve station are:

- A housing
- A maximum of two, four or six function modules (ICF 65 - max. 3)
 - In all ICF 15 the modules M1 and M2 are predefined as shut-off valve and strainer module
 - In all ICF 50 the modules M1 and M2 are predefined as shut-off valve and blind cover (prepared for strainer)
 - In all ICF 65 the module M1 is predefined as shut-off valve

Housing

The design allows maximum capacity and minimum pressure drop, using advanced technology and double seats – offering higher capacity than conventional systems using individual valves and components.

The ICF valve station is multifunctional.

Valve station, type ICF 15, ICF 20, ICF 25, ICF 50 and ICF 65

ICF valve station offers compact dimensions and shortened installation time due to the reduced number of direct welded connections.

Supplied as a complete assembly, it is leak tested at high pressure and its functions are tested under factory controlled conditions.

i NOTE:

When using TIG/MIG/SMAW welding technology, it is possible to install the ICF valve station without prior removal of the function modules from the housing. If using other welding methods or brazing the modules must be removed during the process.

Please consult the product instruction for more details and exceptions.

Ordering

Code number selection

To determine the correct ICF valve station follow steps 1 through 5.

Step 1

Determine application and function requirements:

- Line: Pumped liquid, Liquid Injection, Hot gas defrost, Liquid DX, Return line etc.
- Control: On/off solenoid valve, motorised valve
- Defrost: Electric or hot gas

NOTE:

From the above determine the application reference number (see [Page 54](#))

Step 2

Selection criteria - (Please use Danfoss calculation software)

Download the software from: [Coolselector®2](#)

- Refrigerant
- Capacity
- Temperature
- Circulation rate

NOTE:

From the above determine the valve station required, e.g.: ICF 20 complete with ICM 20-C

Step 3

Establish connection sizes and type

- DIN butt-weld, ANSI butt-weld or SOC weld
- 15 (½ in.), 20 (¾ in.), 25 (1 in.), 32 (1 ¼ in.) or , 40 (1½ in.), 50 (2 in.), 65 (2½ in.) or 80 (3 in.)

Step 4

Establish code number

NOTE:

(see [Page 54](#) to [Page 81](#))

Ordering ICF valve station

Below Nomenclature show the generic configuration and application by identification of housing size, type and application group.

This designation is often used for discussion on possible solutions and will be the final identification on the valve label (see label example)

Figure 61: Ordering ICF valve station

Figure 62: Label example

For ordering, connection size and type must be chosen to get the final identification. **The final identification is done by code number only** (see next pages)

NOTE:

Applicable for all sizes and configurations.

ICAD and coils are not included and must be ordered separately.

When used in systems with CO₂, the o-rings on the ICM module can swell (grow). At service, it is therefore recommended to install new o-rings, before the ICM function module is re-installed in the ICF.

NOTE:

For special applications that cannot be covered by our predefined ICF code numbers please consult Coolselector®2 or your local Danfoss Sales company. [Coolselector®2](#)

Prior to designing „non standard“ configurations there are some basic restrictions to the location of the function modules that must be followed (see [Page 81](#)).

Possible module locations

Module locations are indicated by M1, M2, M3, M4, M5 and M6.

With respect to refrigerant flow, M1 is closest to inlet.

Certificates, declarations, and approvals

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

Some approvals may change over time. You can check the most current status at danfoss.com or contact your local Danfoss representative if you have any questions.

The ICF concept is designed to fulfil global refrigeration requirements. For specific approval information, please contact Danfoss.

Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at store.danfoss.com.

Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at www.danfoss.com/en/service-and-support/documentation.

Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: www.danfoss.com/en/choose-region.

Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at www.danfoss.com/en/service-and-support/learning.

Spare Parts

Get access to the Danfoss spare parts and service kit catalog right from your smartphone. The app contains a wide range of components for air conditioning and refrigeration applications, such as valves, strainers, pressure switches, and sensors.

Download the Spare Parts app for free at www.danfoss.com/en/service-and-support/downloads.

Coolselector®2 - find the best components for you HVAC/R system

Coolselector®2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector®2 for free at coolselector.danfoss.com.
